

NAMEPLATES

LABELS

What makes VisionMark's labeling systems different from others?

We engineer our labels and nameplate products expressly to meet the needs of manufacturers that have demanding applications, where failure is not an option.

- *Material Handling* - where thermal cycling and abrasion from repeated trips in and out of reefers test even the most durable safety labeling and membrane keypads.
- *Fire Trucks* - where extreme heat and UV radiation can challenge the legibility of critical signage on pump control panels.
- *Food Processing and Commercial Food Equipment* - where cooking oils and high temperatures can cause adhesive failure.
- *Machine Tools* - where solvents can attack crucial warning labels and impede membrane switch performance.
- *Power Hand Tools* - where repeated abuse can be a routine part of a normal day's operation.
- *Elevator Cab Panels* - where repetitive handling can reduce readability and functionality.
- *Heavy Construction Equipment* - where UV radiation, abrasion, and high-pressure washing can cause fading and adhesive failure.

Put a proven performer on your vendor short list ...
VisionMark - the Engineered Graphics solution company.

VisionMark provides products that comply with ANSI® Z535, UL® 969, UL® 299, NFPA®1901, ANSI® 117.1, and CSA 22.2 standards.
